Lakewood, CO 80215
Phone (303) 236-2300

Issued Cooperatively by: USDA/NASS Colorado Field Office
Colorado Department of Agriculture

Issued: February 28, 2012

This report provides the results of the Winter Wheat Seedings by Variety Survey, 2012 Crop, conducted by the National Agricultural Statistics Service, Colorado Field Office. Responses were tabulated from 1,073 winter wheat producers throughout Colorado covering 35 percent of the estimated 2.4 million acres seeded for the 2012 crop. The survey was not sampled to provide a direct expansion of the seeded acreage by variety or a measure of the sampling error. While a sufficient number of responses were tabulated to identify the major varieties of winter wheat for the state and major districts, the varietal percentages at the district and/or county level may not be adequately represented.

Hatcher was again the most popular variety seeded in Colorado, planted on 30.3 percent of the acreage for the 2012 crop compared with 34.5 percent for the 2011 crop. **Ripper** continued as the second most popular variety by accounting for 10.1 percent of the acreage, down from 12.1 percent for the 2011 crop. **TAM 111** also continued to hold third place for the 2012 crop by accounting for 9.2 percent of the acres seeded slightly below the 9.5 percent for 2011. **Bill Brown** remains in fourth place with 5.2 percent of the acreage, slightly higher than the 5.1 percent of last year's crop. **Bond CL** remains in fifth place with 4.3 percent of the acreage, and increased from 3.9 percent of the acreage last year. The top five varieties accounted for 59.1 percent of the acreage seeded. The same top five varieties seeded for the 2011 crop accounted for 65.1 percent of the total acreage

Snowmass became the sixth leading variety with 3.9 percent of the acreage seeded, up from 1.0 percent last year. **Above** dropped to seventh place with 2.9 percent of the acreage, but up from the 2.8 percent last year. **Jagger** earned the eighth place ranking by accounting for 2.2 percent of the acreage seeded, up from 1.9 percent last year. **Prairie Red** moved up one place to ninth with 2.1 percent of the acreage seeded compared with tenth place and 1.5 percent last year. **Settler CL** jumped from unranked last year to tenth place with 2.1 percent of the acreage.

These 10 varieties represented 72.3 percent of the state's total acreage seeded for the 2012 crop. In 2011 the top ten varieties accounted for 74.6 percent of the total seeded acreage.
